LATO
PLUS LIQUID
FOLIAR BIOFERTILIZER

JESRYL B. PAULITE, PhD
MELONIE C. LISAYAN, MS

TECHNICAL DESCRIPTION OF THE PRODUCT

The invention relates to foliar fertilizer but more particularly to foliar biofertilizer having green caviar seaweed (*Caulerpa lentillifera*) used in the field of agriculture particularly in crop science, crop production, horticulture, agronomy, crop protection, and related sciences. The foliar fertilizer is a common agricultural product usually used as a supplement to increase crop yield, enhance the quality of crops, and guarantee the safety of commodities. Liquid seaweed foliar fertilizer contains almost every micro-nutrient in a fully chelated form. It is full of carbohydrates, which plants use as a building block. It boosts crop yields, improves the resistance of plants pests, and diseases, increases the uptake of inorganic constituents from the soil, boosts resistance to stress conditions, and reduces storage losses of fruit. This green caviar seaweed is a little bit expensive compared to other locally available seaweed species but the methods of making green caviar seaweed plus liquid foliar biofertilizer offers higher value-adding and return on investment without compromising its benefits to crops.

BENEFICIAL EFFECTS

- ✓ Contains N, P, and K to support plant growth
- ✓ Improves plant yields and quality
- ✓ Enhances plant photosynthesis and improves chlorophyll content
- ✓ Increases plant resistance to environmental stressors
- ✓ Reduces susceptibility to disease and pests
- ✓ Improves microbial activity in the soil
- ✓ Useful to vegetables, fruits, and ornamental plants
- ✓ Non-toxic and safe to use, making it a sustainable and eco-friendly farming solution
- ✓ Improves soil fertility over time, reducing the need for constant application of biofertilizers.

STORAGE

Store at approx.
28-30 C room
temperature

DOSAGE

2 tbps per Liter of
water
